

YEREMIA REYNALDO

Senior Mac Engineer | Enterprise Apple Automation & AI-Driven Endpoint Management

yreynaldo932@gmail.com | [linkedin.com/in/yeremiar](https://www.linkedin.com/in/yeremiar)

10,000+ macOS Devices Managed | 95%+ OS Compliance Rate | 6+ Years in Apple IT | 6 Enterprise Automations Built

Senior Mac Engineer with 6+ years managing enterprise Apple fleets at scale, specializing in Jamf Pro administration, zero-touch deployment, and identity integration. Builds AI-powered automation that replaces manual IT workflows with self-service systems, cutting response time and reducing ticket volume across a 10,000+ device fleet.

CORE COMPETENCIES

Endpoint Management: Jamf Pro, Jamf Connect, Jamf Blueprints, Mosyle, Datto RMM, Zero-Touch Deployment, Apple Business Manager (ABM/DEP), AWS Mac

Scripting and Automation: Bash/Shell, Python, PowerShell, Power Automate, Installinator, swiftDialog

Security and Compliance: Jamf Protect, Splunk (SIEM), Zscaler (ZTNA), Certificate-Based Auth, CIS Level 1/2 Benchmark Compliance, Critical Finding Remediation, Incident Response

Identity and Access: Active Directory, Jamf Connect, Ping Identity, IAM, SSO

Reporting and Analytics: Power BI, Confluence, KPI Dashboards

Platforms: macOS, Windows, Windows 365 Virtual Desktops, AWS EC2 Mac

WORK EXPERIENCE

Senior Mac Engineer | [CVS Health](#) | Feb 2023 - Present

- Manage enterprise macOS fleet of 10,000+ devices across multiple Active Directory domains, maintaining security compliance and performance at scale.
- Led annual macOS upgrade campaigns using Jamf Blueprints to orchestrate the rollout, maintaining 95%+ compliance through major version transitions from Sequoia to Tahoe.
- Designed and delivered AWS Mac infrastructure for offshore contractors, solving a compliance gap for international users who cannot use on-premises hardware, with full Jamf enrollment and a custom provisioning process built for virtual Mac constraints.
- Owned zero-touch deployment pipeline incorporating a swiftDialog-driven build experience and integrated device refresh automation, enabling employees to receive a fully configured Mac from day one with no technician involvement.
- Led fleet-wide deployment of Jamf Protect across 10,000+ devices and migrated its logs into Splunk SIEM for centralized security analytics and threat visibility.
- Modernized the identity and network security stack by upgrading Jamf Connect with Ping Identity integration and leading fleet-wide Zscaler deployment for zero-trust network access.
- Own app compatibility testing and vendor coordination ahead of major OS releases, ensuring fleet-wide readiness before rollout.
- Owned resolution of Critical and High security findings fleet-wide, coordinating remediation across teams to maintain CIS Level 1 and Level 2 benchmark compliance and reduce organizational risk.
- Served as on-call engineer for P1/P2 incidents and partnered with Apple, Microsoft, and Jamf on major platform changes, minimizing disruption across the organization.

IT and Ops Support Analyst | [Spencer Thomas Group](#) | Aug 2022 - Feb 2024

- Automated Mac device enrollment with Mosyle MDM and built a self-service software portal, significantly reducing technician workload and IT support requests.
- Managed SonicWall firewalls, deployed BitDefender antivirus, and led Windows 365 virtual desktop rollout.

IT Support Specialist | [Compass](#) | Feb 2022 - Aug 2022

- Provided technical support for 750+ users and built internal Power BI dashboards to give leadership real-time visibility into IT operations.
- Managed macOS endpoints via Jamf and Windows systems via Datto RMM across a distributed workforce.

IT Support / Secure Workstation | [Right Networks](#) | Dec 2019 - Feb 2022

- Deployed endpoint security and backup solutions, participated in incident response, and used PowerShell and Confluence to standardize system health procedures.

KEY PROJECTS

- **Self-Healing Patch Automation:** Automated detection and resolution of application failures across 10,000+ devices, eliminating manual remediation and reducing support ticket volume.
- **Mac Device Refresh Automation:** End-to-end zero-touch workflow that automatically migrates a user's app assignments to a replacement device and notifies all stakeholders, replacing a fully manual process.
- **Jamf Compliance Dashboard:** Real-time Power BI dashboard providing visibility into environment health, driving proactive cleanup and preventing system instability.
- **Restart Compliance Notification System:** User-facing enforcement tool that improved security patch adoption fleet-wide while preserving employee productivity through a structured defer option.
- **Self-Service Prestage Assignment Workflow:** Replaced direct Jamf console prestage access with an auditable Power Automate workflow; processed 221 requests since rollout at a 46 second average run time, closing off the most common source of scope misassignment.
- **AI-Powered Admin Rights Evaluation (In Progress):** Building a self-learning system that auto-approves or auto-denies Mac admin rights requests at high confidence thresholds, routing only uncertain cases to human review.
